(54) Title: CURABLE LIQUID COMPOSITION, CURED FILM, AND ANTISTATIC LAMINATE

(57) Abstract: To provide a curable composition having excellent applicability and capable of forming a coat (film) having high hardness and high refractive index and excelling in scratch resistance and adhesion to a substrate and a low-refractive-index layer on the surface of various types of substrates, a cured product of the curable composition, and a laminate having a low reflectance and excelling in antistatic property. A curate e composition comprising particles (A) prepared by bonding oxide particles of at least one element selected from the group consisting of silicon, aluminum, zirconium, titanium, zinc, germanium, indium, tin, antimony, and cerium with an organic compound having a polymerizable unsaturated group, a compound (B) having a urethane bond and two or more polymerizable unsaturated groups in the molecule, and a photoinitiator (C).
